

SDToolkit™

Systems & Software Development Portal

The Challenges of Systems and Software Development

Managing software projects and process is like a juggling act - it's inherently complex. Often involving large numbers of people, situations, and organizations, projects must succeed as promised without disrupting current operations. At the same time, they must meet development requirements:

- Meet customer's / users specifications
- Deliver software on time and on budget
- Meet potential future requirements

The balance comes in lowering the risk and cost of software projects while meeting all of the requirements in an intelligent way.

The Solution is SDToolkit Systems & Software Portal

We designed **SDToolkit** as an intelligent process and project management tool to manage systems and software development projects. It can be used over the Internet or intranet to:

- Automatically select and design a software project plan
- Manage people
- Aggregate and catalog all documents handled by project team members, working together regardless of location!

The Methodology

Wisdom's Minerva™ project & process management methodology, and Wisdom's Spiral development methods are embedded within *SDToolkit*. These methodologies have been used in hundreds of successful projects, helping companies around the world improve the way they do business - lowering cost, improving quality, and improving response time.

SDToolkit™ is a powerful systems and software development tool. It is designed to help project managers, software developers and professionals be more effective with systems and software development projects. SDToolkit helps to develop and manage documents required by the organization to ensure effective planning, operations and control of processes.

SDToolkit

Encompasses Software Engineering Best Practices

- The Project Manager simply selects the pre-loaded software development template (or develop and input your own)
- A new project is generated which includes the schedule, sample documentation, pointers to resources and information files (or upload all of your existing projects and manage them as well)
- Team members are automatically told what they need to do, where to put deliverables and how to do each step for which they are responsible
- The project schedule, documentation and team are easily tracked in one place, on-line, in the *SDToolkit*!

Proven Design Produces Results

- *SDToolkit* facilitates the software development process by embedding the processes, how-to's and documentation on an interactive, web-based platform, available to the entire team
- Team members have the ability to contextually match project work to deliverables, ensuring that everyone knows exactly how and when to do each task
- *SDToolkit* has project management and knowledge management features, which keep track of document revisions and authors, creating an audit trail of work completed

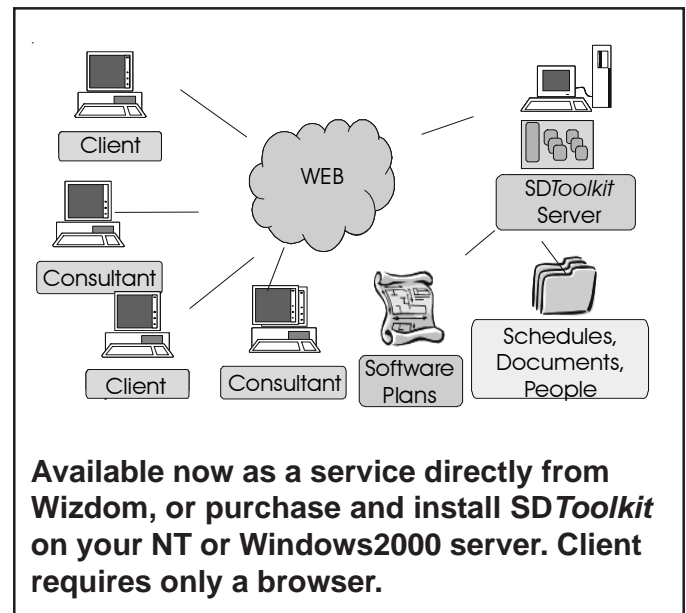

High Value Functions Drive Team Collaboration

- Built-in calendars and discussion capabilities allow everyone to participate in knowledge sharing, even if they're on the other side of the world
- Gantt chart, which is compatible with MS Project, shows the team who's doing what, and when
- Robust three-tier security design ensures that organizations and their partners have secure access to project content
- Links to the MS Outlook Calendar
- Provides WEB Links to pointers in Asset Explorer so that the user is connected to web data anywhere, anytime

What *SDToolkit* Can Do

- Manage all software development projects
- Create, manage and distribute your own software methods and best practices, or use *Wizdom* templates
- Manage multiple software requirements documents
- Produce audit trails from all work done by consultants, clients and partners
- Decrease costs and increase productivity

Available now as a service directly from *Wizdom*, or purchase and install *SDToolkit* on your NT or Windows2000 server. Client requires only a browser.

About *Wizdom*

Since 1986, *Wizdom* has been a recognized leader in providing clients with innovative process-based business and software solutions for improving performance. *Wizdom*'s integrated software, training and consulting result in an improved enterprise-wide business process, enabling you to communicate, plan and execute a unified corporate strategy. *Wizdom* helps companies grow by aggressively pursuing new opportunities and employing the best business practices.

Our experience 'Wizards' can help make your organization more effective and competitive. *SDToolkit*TM is defining a new market space - **the software development portal.**
